

## Assignment number: 2

**Problem definition:** Create MFA for authentication.

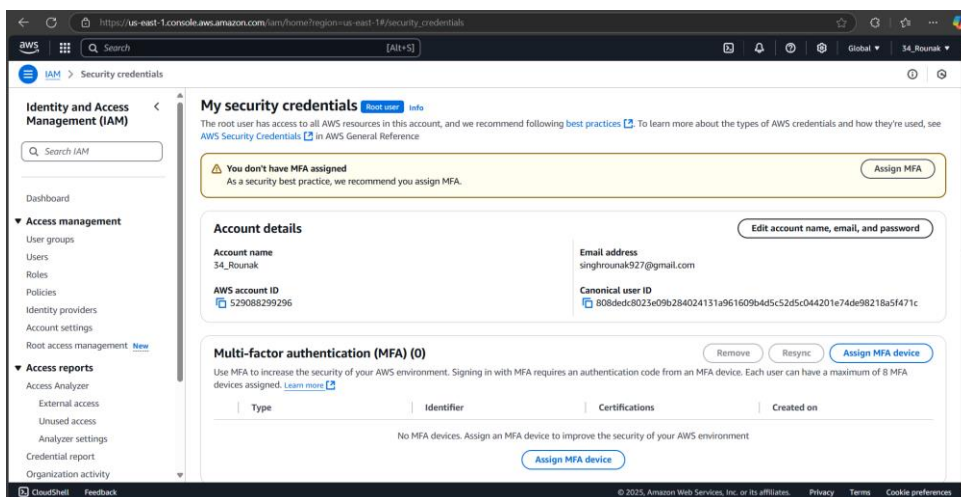

### Steps:

Step 1: Log in to your AWS Management Console.

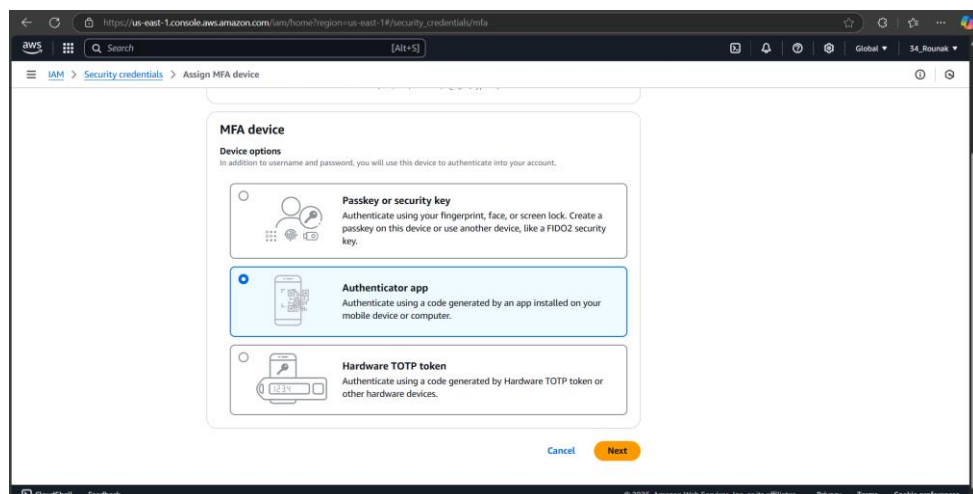

Step 2: Click your account name in the top-right corner and select **“My Security Credentials.”**

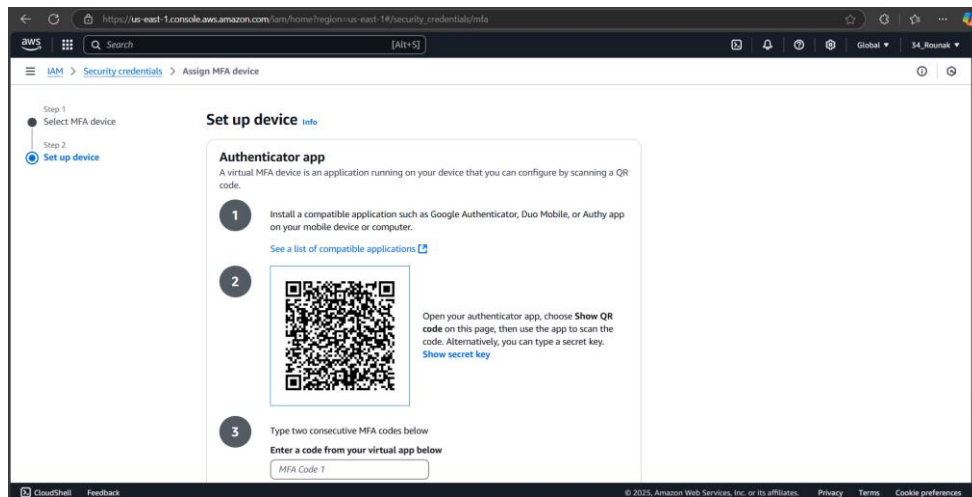

Step 3: Click on **“Assign MFA”**.

Step 4: Set a device name. Under **“MFA device”**, click on **“Authenticator app”**.

Step 5: Configure the Device. Click **“Show QR code”**. Open your MFA app on your smartphone and scan the QR code. After scanning, your app will start generating six-digit one-time passwords (OTPs).

Step 6: MFA device is assigned successfully.
